

IN THE CLAIMS

Claim 1 has been amended as follows:

1. (Currently amended) A magnetic resonance apparatus comprising:

a magnetic resonance scanner having a surface therein;

a gradient coil system disposed in said scanner; and

an adhesive disposed between said gradient coil system and said surface
attaching said gradient coil system to said scanner, said adhesive
having a melting temperature in a range between approximately 50°C
and 90°C.

2. (Original) A magnetic resonance apparatus as claimed in claim 1 wherein said gradient coil system has a surface facing said surface of said scanner, and wherein said adhesive is disposed between said surface of said scanner and said surface of said gradient coil system.

3. (Original) A magnetic resonance apparatus as claimed in claim 1 wherein said surface of said scanner forms a cavity in which said gradient coil system is disposed and attached.

4. (Original) A magnetic resonance apparatus as claimed in claim 3 wherein said cavity is cylindrical.

5. (Original) A magnetic resonance apparatus as claimed in claim 3 wherein said cavity has a middle region with a barrel shape.

6. (Original) A magnetic resonance apparatus as claimed in claim 1 wherein said gradient coil system comprises a plurality of gradient coils each formed by multiple sub-coils, and wherein respective parts of said sub-coils are respectively disposed in two structurally separate halves of said gradient coil system.

7. (Original) A magnetic resonance apparatus as claimed in claim 6 wherein said surface of said scanner forms a cavity in which said gradient coil system is disposed and attached, said cavity having a middle region with a barrel shape, and said halves being separated from each other and respectively disposed at opposite sides of said middle region.

8. (Original) A magnetic resonance apparatus as claimed in claim 7 wherein said gradient coil system comprises a carrier on which said halves are mounted separated from each other.

9. (Original) A magnetic resonance apparatus as claimed in claim 8 wherein said halves and said carrier each have a hollow cylindrical shape.

10. (Original) A magnetic resonance apparatus as claimed in claim 1 wherein said scanner comprises a basic field magnet having said surface to which said gradient coil system is attached.

11. (Original) A magnetic resonance apparatus as claimed in claim 1 wherein said adhesive is selected from the group consisting of hard foams and adhesive resins.

Claims 12 and 13 have been cancelled.

12. (Cancelled)

13. (Cancelled)

Claim 14 has been amended as follows:

14. (Currently amended) A magnetic resonance apparatus as claimed in claim 12 1 wherein said adhesive is a wax.

15. (Original) A magnetic resonance apparatus as claimed in claim 14 wherein said wax is selected from the group consisting of stearin, paraffin and carnauba wax.

Claim 16 has been amended as follows:

16. (Currently amended) A magnetic resonance apparatus as ~~claimed in claim 12~~ wherein said comprising:

a magnetic resonance scanner having a surface therein;

a gradient coil system disposed in said scanner;

an adhesive disposed between said gradient coil system and said surface

attaching said gradient coil system to said scanner, said adhesive

having a low melting temperature; and

said gradient coil system comprises comprising at least one coil and a control unit connected to said at least one coil for controlling a quantity flowing in said coil to set a temperature of said gradient coil system, during operation of said scanner to acquire magnetic resonance data, that is below said melting temperature of said adhesive, said control unit also controlling said quantity to selectively increase said temperature of said gradient coil system above said melting temperature of said adhesive, allowing release of the attachment of said gradient coil system to said scanner.

Claim 17 has been cancelled.

17. (Cancelled)

18. (Original) A magnetic resonance apparatus as claimed in claim 16 wherein said gradient coil system comprises a plurality of gradient coils and wherein said at least one coil is at least one of said gradient coils, and wherein said quantity is current.

19. (Original) A magnetic resonance apparatus as claimed in claim 16 wherein said gradient coil system comprises a plurality of shielding coils, and wherein said at least one coil is at least one of said shielding coils, and wherein said quantity is current.

20. (Original) A magnetic resonance apparatus as claimed in claim 16 wherein said gradient coil system comprises a cooling coil and wherein said at least one coil is said cooling coil, and wherein said quantity is a fluid coolant.
